FOR 534: ECONOMICS OF THE FOREST RESOURCE

This class is for graduate students who want to know more about how economic theory and methods are applied to a wide range of forest policy and management questions. The course topics will include economics of timber production, forest product markets and trade, international trade, economics of risk and uncertainty, economics of ecosystem services (e.g. recreation, biodiversity, water, carbon sequestration), valuation of nonmarket goods and services, policy evaluation, discounting, and sustainable development.

FALL 2018 (3 CREDITS)
T/R 2:00 – 3:20 PM
