### RESEARCH SUMMARY

---

My research focuses on two closely linked lines of work: (1) play and playfulness' assessment, activation, and impact on human health and performances, and (2) leisure as a broad context and mechanism for attaining human wellness and fulfillment. I employ a wide range of methods (e.g., experiments, surveys, psychometric testing, ethnographic methods, cross-cultural studies) and statistical modeling techniques in my research to understand personal factors and environmental conditions key to achieving human health, active living, and wellbeing through play and leisure. My recent work emphasizes interdisciplinary collaborations with diverse stakeholders to develop innovation research and outreach that integrates health promotion and environmental education through place-based nature play and learning.
